**RECOMBINANT DATA CORP. IMPLEMENTS PROVEN QUALITY REPORTING SOLUTION FOR MOREHOUSE SCHOOL OF MEDICINE**

Implementation enhances preventative care, improves patient health, and reduces long-term healthcare costs

NEWTON, Mass, May 26, 2009 – Recombinant Data Corp., a healthcare data warehousing and clinical intelligence solutions provider, today announced that it has implemented a quality reporting solution at the Morehouse School of Medicine (MSM), Department of Family Medicine.

Report Central, Recombinant's clinical intelligence application, has assisted the Morehouse Medical Associates Comprehensive Family Healthcare Center to improve its quality of care for diabetes patients using a variety of health metrics and an effective process for patient interventions, disease management, and clinical decision support. The solution utilizes the Chronic Care Model (CCM), which emphasizes the importance of improving preventative medicine through the measurement of quality metrics developed by the National Committee for Quality Assurance (NCQA).

"MSM now has the capability to rapidly aggregate, evaluate, and act upon our own NCQA performance measures," said Charles Sow, MD, MSCR, Morehouse School of Medicine. "This not only enhances our care, it also improves patient health and reduces long-term healthcare costs."

"Our relationship with Recombinant is just one of the many examples of how MSM remains on the leading edge of healthcare," said Folashade Omole, MD, FAAFP. "Our sophisticated systems, advanced processes, and experienced staff ensure that every diabetes patient receives world-class care at our facility."

Dr. Sow and Dr. Omole co-presented "Overcoming the Obstacles of Implementing a Chronic Care Model in a Residency Program" at the 42<sup>nd</sup> annual Society of Teachers of Family Medicine (STFM) Spring Conference. The lecture addressed both the challenges of a CCM implementation, as well as the positive impact of quality reporting for MSM.

"Healthcare providers such as MSM can benefit from the vast capabilities built into Report Central," said Peter Emerson, chief executive officer, Recombinant Data Corp. "The solution, originally developed and implemented at Partners HealthCare in Boston, supports multiple public reporting measures, monitors pay-for-performance contracts, tracks physician incentive programs, examines electronic health record (EHR) adoption and utilization, upholds consistency of care, as well as aids with capacity planning and optimization."

**About Morehouse School of Medicine**

MSM recruits and trains minority and other students as physicians, biomedical scientists and public health professionals committed to improving the health and well-being of communities. More than 70 percent of our graduates practice in primary care specialties across the nation. MSM is a member of the Atlanta University Center (AUC) – the largest consortium of four Historically Black institutions in the nation.
